

Synthetic Behavioral Study for PDF Grounding Tests

Programmatically generated fixture - no human participants or copyrighted source material

Abstract

This synthetic paper tests page, section, figure, table, DOI, and material-link extraction.

All values, labels, and graphics are generated solely for automated software testing.

1. Introduction

The fictional task compares two color-coded conditions using generated response-time values.

No claim in this document is intended as scientific evidence or advice.

Synthetic DOI: 10.12345/paper-to-paradigm.synthetic-fixture

Supplement: <https://example.org/synthetic-supplement.pdf>

Code: <https://example.org/synthetic-code>

2. Methods

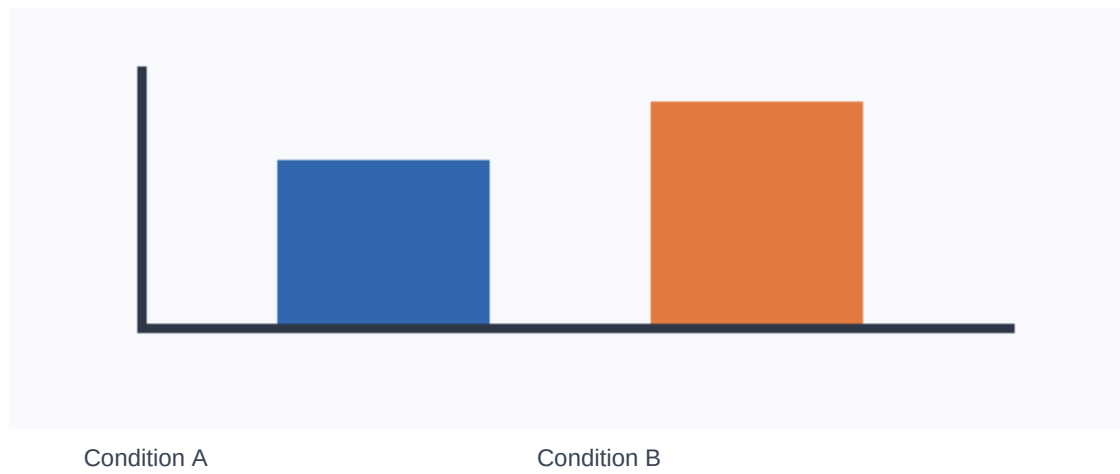

2.1 Participants

No participants were recruited. The fixture contains synthetic labels only.

2.2 Procedure

A generated timeline contains instruction, practice, and formal phases.
Condition A and Condition B are balanced in a deterministic synthetic schedule.

Figure 1. Synthetic response pattern

3. Results

Generated values are included only to exercise extraction and locator logic.
The synthetic difference must not be interpreted as an empirical effect.

Table 1. Synthetic condition summary

Condition	Synthetic mean	Synthetic N
A	510 ms	40
B	475 ms	40

4. Discussion

This fixture demonstrates a source-grounded layout without reproducing any published paper.
Expected use is limited to automated and visual testing of prepare_paper.py.

Appendix

The appendix intentionally occupies the same PDF as the synthetic main text.
